### COMMON COINS & CURRENCY YOU MAY HAVE

**U.S. dimes, quarters & half dollars dated 1964 & before** are made of 90% silver. When silver trades at \$20 per ounce, we buy these coins at about 16-times their face value. That's about \$1.60 for a dime, \$4 for a quarter, & \$8 for a half dollar. Coins with collectable dates or in better condition bring even more. **Undamaged silver dollars** dated 1935 & before are worth a minimum of \$22 each, with several dates bringing much, much more. **Half dollars dated 1965 to 1970** are 40% silver, & most **nickels dated 1942 to 1945** are 35% silver. Very few coins that you may find in circulation have any silver value at all. Values will vary with condition and the ever-changing precious metals markets.

**Many, many early U.S. coins are valuable depending on their style, date & mintmark. Questions? Call us!**

With few exceptions, none of the **U.S. dollar coins minted after 1935** are worth more than a dollar.

You will not find any valuable modern dollar coins in circulation.

**OBSOLETE U.S. CURRENCY** can be quite valuable, but not all old currency was created equal. The blue seal silver certificates & red seal U.S. notes are actually quite common. Well-used specimens of these \$1, \$2 & \$5 notes are worth only a few cents over their face value, while uncirculated pieces are worth only a dollar or two more. Brown seal & gold seal notes, & any U.S. note that is larger than our current notes, will be worth more. Almost no green seal note, regardless of its date or design, is collectable.
